Introduction

Sabre Profiles Overview

The objective of Sabre Profiles (aka PPP) is to develop a profile system that:

- Provides a single view of the traveler
- Enables or creates new or improved revenue channels
- Offers best-of-breed products and services
- Maximizes the value of resources spent on profile data and services.

Sabre Profiles helps Sabre to:

- Achieve unique identification of all travelers across the Sabre Enterprise
- Create/Enable value-added features for users of the Sabre System and Sabre Products and Services, as well as their customers
- Increase ROI associated with profile system investments across the Sabre Enterprise System Architecture.

Exception Message Types

Error Messages

There are three types of exception messages that describe the errors discussed in this section.

Sabre Web Services Errors

Sabre Web Services Errors occur within the Sabre Web Services infrastructure. They are caused by fault messages from the web client or problems with the Sabre Profile Web Services connectivity. The infrastructure detects and generates these errors and returns them as SOAP faults, with or without ebXML headers.

Sabre Profiles System Errors

Sabre Profiles System Errors occur within the Sabre Profile application for many reasons; however, in the scenario provided in the [Sabre Web Services Errors](#) section, a SOAP fault message is returned.

Sabre Profiles Application Errors

Sabre Profiles Application Errors are generated by the Sabre Profile application services that are called by the SWS infrastructure. They are returned to clients in the ErrorRS XML response format.

Sabre Web Services Errors

For this example, a SOAP fault message is returned. When the response contains the `<soap-env: fault>` element, an HTTP status code of 500 is returned. If no SOAP fault exists, an HTTP Status Code of 200 is returned.

The general structure of a SOAP fault message is shown as follows. (For additional information on XML Structure, refer to Schemas.)

```

```

`FaultCode` and `FaultString` provide the necessary information about the type of errors.

Authentication failed: Authentication can fail because the ICE system is down, username/password/Group/Domain combination is invalid, account is inactive, etc.

If any of these instances occur, a SOAP fault message displays with the following data:

```

<faultcode>soap-env:Client.AuthenticationFailed</faultcode>

<faultstring>Authentication failed</faultstring>

```

Authorization failed: Authorization can fail because the ICE system is down, or the username/password/Group/Domain combination used does not have the right privileges to access the web service.

If any of these instances occur, a SOAP fault message displays with the following data:

```

<faultcode>soap-env:Client.AuthorizationFailed</faultcode>

<faultstring>Authorization failed</faultstring>

```

Sabre Profiles System Errors

Sabre Profiles System Errors can occur when the hardware containing the application server is down, the database is down, or connectivity cannot be established.

If any of these instances occur, a SOAP fault message (using the structure explained above) displays, together with a stack trace including additional details:

```

<faultcode>soap-env:Server.SystemFailure</faultcode>

<faultstring>Service provider invocation timed
out</faultstring>

```

When the application is unable to handle a request, EPS application runtime errors occur and a SOAP fault message displays, together with a stack trace:

```
<faultcode>soap-env:EPSApplication.SystemFailure</faultcode>
<faultstring>EPS Application Server cannot process
request</faultstring>
```

When the EPS database server is down, or connectivity cannot be established to the database servers, a SOAP fault message displays, together with a stack trace:

```
<faultcode>soap-
env:EPSApplication.DatabaseSystemFailure</faultcode>
<faultstring>EPS Application Server cannot connect to database
server</faultstring>
```

Sabre Profiles Application Errors

Sabre Profiles Application Errors are application-specific errors that can occur because of an invalid XML message, invalid data in the request, etc. If any of these instances occur, a SOAP error response message is sent.

Sabre Profiles Create Error Messages

If an error occurs during the *Create* process, a SOAP error response message is returned. The error message and code displays in the `ErrorMessage` element of the schema. The format is shown below.

```
<ResponseMessage>
  <Errors>
    <ErrorMessage ErrorCode="123"> </ErrorMessage>
  </Errors>
</ResponseMessage>
```

The error message structure for a *Create* request is:

```
<RequestTypeCode>::<RequestCategoryType>::<Error Message >::
<Additional Details>
```

Where:

- RequestTypeCode is **C**
- RequestCategoryType is:
 - PRF (Profiles)
 - TPL (Templates)
 - FLT (Filters)
 - FMT (Formats)

- ErrorMessage resembles the following format:

```
<ErrorMessage ErrorCode="123">C::Invalid XML Data:: Profile
Type cannot be null</ErrorMessage>
```

For a list of prospective error messages, refer to [Chapter 3, Error Message Descriptions](#).

Sabre Profiles Update Error Messages

If an error occurs during the *Update* process, a SOAP error response message is returned. The error message and code displays in the ErrorMessage element of the schema. The format is shown below.

```
<ResponseMessage>
  <Errors>
    <ErrorMessage ErrorCode="123"> </ErrorMessage>
  </ResponseMessage>
```

The error message structure for an *Update* request is:

```
<RequestTypeCode>::<RequestCategoryType>::<Error Message >::
<Additional Details>
```

Where:

- RequestTypeCode is **U**
- RequestCategoryType is:
 - PRF (Profiles)
 - TPL (Templates)
 - FLT (Filters)
 - FMT (Formats)
- ErrorMessage resembles the following format:

```
<ErrorMessage ErrorCode="123">U::Invalid XML Data:: Profile
Type cannot be null</ErrorMessage>
```

For a list of prospective error messages, refer to [Chapter 3, Error Message Descriptions](#).

Sabre Profiles Read Error Messages

If an error occurs during the *Read* process, a SOAP error response message is returned. The error message and code displays in the `ErrorMessage` element of the schema. The format is shown below.

```
<ResponseMessage>
  <Errors>
    <ErrorMessage ErrorCode="123"> </ErrorMessage>
  </ResponseMessage>
```

The error message structure for a *Read* request is:

```
<RequestTypeCode>::<RequestCategoryType>::<Error Message >::
<Additional Details>
```

Where:

- RequestTypeCode is **R**
- RequestCategoryType is:
 - PRF (Profiles)
 - TPL (Templates)
 - FLT (Filters)
 - FMT (Formats)
- ErrorMessage resembles the following format:

```
<ErrorMessage ErrorCode="123">R::Invalid XML Data:: Profile
Type cannot be null</ErrorMessage>
```

For a list of prospective error messages, refer to [Chapter 3, Error Message Descriptions](#).

If no profile is found, a `Success` response message is sent in the format shown below.

```
<ResponseMessage>
  <Success>
</ResponseMessage>
<Message>No Profiles are found in the database based on the read
request Criteria </Message>
```

Sabre Profiles Search Error Messages

If an error occurs during the *Search* process, a SOAP error response message is returned. The error message and code displays in the `ErrorMessage` element of the schema. The format is shown below.

```
<ResponseMessage>
  <Errors>
    <ErrorMessage ErrorCode="123"> </ErrorMessage>
  </Errors>
</ResponseMessage>
```

The error message structure for a *Search* request is:

```
<RequestTypeCode>::<RequestCategoryType>::<Error Message >::
<Additional Details>
```

Where:

- `RequestTypeCode` is **R**
- `RequestCategoryType` is:
 - PRF (Profiles)
 - TPL (Templates)
 - FLT (Filters)
 - FMT (Formats)
- `ErrorMessage` resembles the following format:

```
<ErrorMessage ErrorCode="123">S::Invalid XML Data:: Profile
Type cannot be null</ErrorMessage>
```

For a list of prospective error messages, refer to [Chapter 3, Error Message Descriptions](#).

If no profile is found based on the *Search* criteria, a `Success` response message is sent in the format shown below.

```
<ResponseMessage>
  <Success>
</ResponseMessage>
<ProfileInfo>
  <Message>No Profiles are found in the database based on the
Search Criteria </Message>
</ProfileInfo>
```

If more than 250 profiles are found based on the *Search* criteria, a message is sent in the format shown below.

```
<ResponseMessage>
  <Success>
</ResponseMessage>
<ProfileInfo>
  <Message>Max Response Limit Size Reached: Please refine your
Search Criteria </Message>
</ProfileInfo>
```

Sabre Profiles Delete Error Messages

If an error occurs during the *Delete* process, a SOAP error response message is returned. The error message and code displays in the `ErrorMessage` element of the schema. The format is shown below.

```
<ResponseMessage>  
  <Errors>  
    <ErrorMessage ErrorCode="123"> </ErrorMessage>  
  </Errors>  
</ResponseMessage>
```

The error message structure for a *Delete* request is:

```
<RequestTypeCode>::<RequestCategoryType>::<Error Message >::  
<Additional Details>
```

Where:

- `RequestTypeCode` is **D**
- `RequestCategoryType` is:
 - PRF (Profiles)
 - TPL (Templates)
 - FLT (Filters)
 - FMT (Formats)
- `ErrorMessage` resembles the following format:

```
<ErrorMessage ErrorCode="123">D::Invalid XML Data:: Profile  
Type cannot be null</ErrorMessage>
```

For a list of prospective error messages, refer to [Chapter 3, Error Message Descriptions](#).
